The Friedrich-Alexander-University Erlangen-Nürnberg (FAU) consists of five faculties with theFaculty of Engineering being the largest. Within the 40+ years of  its existence, the faculty has earned an excellent reputation for cutting-edge research and high-quality education. Currently, 26 degree programmes are offered, several of them taught in English. As part of a global network of leading universities, research institutions, and high-tech industry, the Faculty of Engineering can offer its students many opportunities to become part of the international scientific community and to establish links to industry.

Facts and figures about the Faculty of Engineering (Winter Semester 2015/16)
- 40,174 students, including 4,341 from abroad
- 218 co-operations in 48 countries
- 59 degree programmes
- 3 elite master’s programmes in the framework of the Elite Network of Bavaria
- 500 international university partnerships in more than 70 countries

Erlangen is a cosmopolitan and lively student town located in the Nuremberg metropolitan region (3.5 mio. inhabitants), the “home for creative minds”, which combines tradition, culture and groundbreaking science and technology. Well-known global players as well as many internationally operating medium-sized companies are based here, providing plenty of job and internship opportunities.

THE MAP ENVIRONMENT
MAP is embedded into the Faculty of Engineering of the FAU and is greatly enriched by the direct involvement of the partner universities of Bayreuth and Würzburg. Local research centers like the Fraunhofer Institute for Integrated Systems and Device Technology (IISB), the Max Planck Institute for the Science of Light, and the Helmholtz Institute for Renewable Energy Production as well as the Cluster of Excellence “Engineering of Advanced Materials” are also directly involved in MAP.

Erlangen is a buoyant student town located in the Nuremberg metropolitan region (3.5 mio. inhabitants), the “home for creative minds”, which combines tradition, culture and groundbreaking science and technology. Well-known global players as well as many internationally operating medium-sized companies are based here, providing plenty of job and internship opportunities.

What is “Advanced Materials and Processes”
“Advanced Materials and Processes” (MAP) is a unique and interdisciplinary, international English-taught programme, leading to the degree of “Masters of Science with Honours”. MAP has been supported since 2005 by the Elite Network of Bavaria (ENB). Aiming to pool regional strength in advanced materials and processes, the programme is hosted in Erlangen and involves contributions from its partner universities in Baymuth and Würzburg.

At the heart of the MAP programme is a unique combination of chemical and biological engineering with materials science and engineering. By providing students with a cutting edge education in both of these fields, MAP is training the next generation of engineers with the skills necessary to produce innovative materials in the most efficient and sustainable way.

MAP is built around the following four focal subjects with students specializing in twofrom the second semester onwards:
- Advanced Processes
- Biomaterials and Bioprocessing
- Computational Materials Science and Process Simulation
- Nanomaterials and Nanotechnology

These focal subjects aim to synergize advanced materials and processes in key technology areas. The intensive study of these topics together with the associated project work provides students with broad career opportunities in industry as well as in academia.

Well-known global players as well as many internationally operating medium-sized companies are based here, providing plenty of job and internship opportunities.
1. Excellent Bachelor’s Degree in MAP-related subject required
2. Applicants should belong to the top 10-15% of their year group, as documented by their respective national grades
3. English proficiency demonstrated through a high TOEFL (or equivalent) score
4. Start of studies: Winter semester
5. Application deadline: citizens of EU countries: 31 March citizens of EU countries: 15 July
6. Detailed information about the application procedure can be found on the website www.elite-map.tf.fau.de

The development of advanced materials and processes is widely regarded as a key response to the challenges of the 21st century including climate change, disease control and securing the supply of clean water, food and energy. Nanotechnology, micro- and nanoelectronics, photonics and biotechnology are the main drivers in the development of tomorrow’s products and services. Innovative materials and production concepts are an integral part in all these technologies, and materials science and engineering together with chemical and biological engineering play a fundamental role in enabling new developments in these fields.

Advanced Materials and Processes (MAP) is training the next generation of engineers and scientists leading to a Master’s thesis. The programme offers a wealth of soft skills seminars and excursions. MAP does not only train excellent academic researchers. Due to their broad background in materials science and engineering as well as in process engineering, and their specific expertise in their focal subjects, MAP graduates are successful both in industry and research. A high percentage of MAP graduates pursue a PhD, many of them in Erlangen or at one of the MAP partner universities. Recent graduates have also secured PhD positions at other world-class universities and research institutes including University of Cambridge (UK), University of California at San Diego (USA), Washington State University (USA), McGill University (CDN), McMaster University (CDN), ETH Zürich (CH) and AMLU Amsterdam (NL).

ELITE M.SC. (HONS) PROGRAMME “ADVANCED MATERIALS AND PROCESSES”

ECTS Distribution in Master’s Programme

FUNDAMENTALS
- Basics
- Focal Subjects
- Soft Skills
- Practical course
- Research
- Miniprojects
- Master’s Thesis

Lectures and Courses

M.Sc. (Hons) “Advanced Materials and Processes”, 4 Semester

- Semester 1: Interdisciplinary foundation: depending on their background, students study the fundamentals in materials science and engineering as well as their chemical and biological engineering in an individually tailored curriculum, which includes a practical element. In addition, “Basics” classes for all MAP-students introduce them to the four focal subjects.
- Semester 2: Focal subjects: depending on their background, students study the fundamentals in materials science and engineering together with chemical and biological engineering. MAP offers an individually tailored study plan that quickly familiarizes graduates from one discipline with the fundamentals of the other.
- Semester 3: Further lectures in the students’ chosen focal subjects. The remaining time of the semester is reserved for miniprojects and soft skills courses.
- Semester 4: The final stage of the MAP programme is a 6-month project, leading to a Master’s thesis.

Career Prospects

The MAP programme prides itself in the academic and professional development of its students through a unique combination of lectures and tutorials, research projects and transferable soft skills courses. MAP graduates are successful both in industry and research. A high percentage of MAP graduates pursue a PhD, many of them in Erlangen or at one of the MAP partner universities. Recent graduates have also secured PhD positions at other world-class universities and research institutes including University of Cambridge (UK), University of California at San Diego (USA), Washington State University (USA), McGill University (CDN), McMaster University (CDN), ETH Zürich (CH) and AMLU Amsterdam (NL).

MAP does not only train excellent academic researchers. Due to their broad background in materials science and engineering as well as in process engineering, and their specific expertise in their focal subjects, MAP graduates are also highly sought after by industry. Soft skills courses like in industrial project management further contribute to the success of graduates. Typical industry destinations include the energy sector, aerospace, automotive, oil and gas, water treatment, food and drink, health and safety, and building technology.

Prerequisites and Programme Structure

- Expected BACHELOR major:
  - Materials Science and Engineering, Chemical and Biological Engineering, Life Science Engineering, Nanotechnology, Polymer Engineering, Chemistry, Physics, or related subjects
  - Degree of Graduation: Bachelor of Science (B.Sc.) / Bachelor of Engineering (B.Eng) / Bachelor of Technology (B.Tech.) or equivalent

- M.Sc. (Hons) “Advanced Materials and Processes”, 4 Semester

- Semester 1: Interdisciplinary foundation: depending on their background, students study the fundamentals in materials science and engineering as well as their chemical and biological engineering in an individually tailored curriculum, which includes a practical element. In addition, “Basics” classes for all MAP-students introduce them to the four focal subjects. Soft skills courses which include the craft of research and technical writing, rhetoric and intercultural skills complete the curriculum.
- Semester 2: “Basics” classes: In addition, students focus on two of the four focal subjects and enter the research labs for the first time for their miniprojects. Further soft skills courses in economics, management and personal development and an excursion to several companies or institutes are offered.
- Semester 3: Further lectures in the students’ chosen focal subjects. The remaining time of the semester is reserved for miniprojects and soft skills courses. Following the third semester’s lecture period, the students complete a minimum 12-week industrial internship.
- Semester 4: The final stage of the MAP programme is a 6-month project, leading to a Master’s thesis.

Career Prospects

The MAP programme prides itself in the academic and professional development of its students through a unique combination of lectures and tutorials, research projects and transferable soft skills courses. MAP graduates are successful both in industry and research. A high percentage of MAP graduates pursue a PhD, many of them in Erlangen or at one of the MAP partner universities. Recent graduates have also secured PhD positions at other world-class universities and research institutes including University of Cambridge (UK), University of California at San Diego (USA), Washington State University (USA), McGill University (CDN), McMaster University (CDN), ETH Zürich (CH) and AMLU Amsterdam (NL).

MAP does not only train excellent academic researchers. Due to their broad background in materials science and engineering as well as in process engineering, and their specific expertise in their focal subjects, MAP graduates are also highly sought after by industry. Soft skills courses like in industrial project management further contribute to the success of graduates. Typical industry destinations include the energy sector, aerospace, automotive, oil and gas, water treatment, food and drink, health and safety, and building technology (e.g. Bosch, Daimler, Siemens, BASF).

Support

- We are able to award a limited number of merit based MAP-scholarships. Further financial support, in addition to e.g. DAAD grants, can be obtained by working as a student research assistant, positions being widely available in the Faculty of Engineering.
- MAP educational grants: Students can apply for support in order to attend external events (language classes, workshops, conferences etc.) which supplement the course’s academic and professional training programme.
- MAP is a highly selective course with a limited class size. With a very low student to faculty ratio, MAP students are well cared for both academically and pastorally.
- The MAP programme is academically directed by two programme chairs and representatives of the four focal subjects. MAP is administratively organized by a dedicated programme office.
- The programme office provides information e.g. on visa procedures, living and studying in Erlangen for international students before coming to Erlangen. For all current MAP-students, the office timetables lectures, practical courses and soft skills courses, administers exams and provides pastoral support.
